waiting to receive further instructions for delivery/collection from either Handling of Dry Ice (UN1845) used as a cooling agent for non-
Dry ice is the solid form of the chemical carbon dioxide (CO₂), just like normal ice. Dry ice is extremely cold (−109.3°F/-78.5°C), so it is used for a wide variety of purposes. When handling dry ice, it is important to wear leather gloves for protection and to avoid letting the dry ice touch your bare skin. Depending on the product’s water content and proximity to the dry ice, it is possible to burn yourself or suffer frostbite.

**EASY COOKING INSTRUCTIONS**

(For best results, this is a one-step cooking method. Wear safety goggles when handling the alcohol.) Dry ice (frozen carbon dioxide) is often used at fish markets and grocery stores to keep products cool. Wear thick.
